# DATA SCIENCE LABORATORY MANUAL

## Module I ? Data Science Fundamentals

Topic: Types of Data

### OVERVIEW & LEARNING OBJECTIVES

Structured, semi-structured, unstructured, quantitative continuous/discrete, and qualitative nominal/ordinal data.

### KEY TOPIC CONCEPTS & METHODOLOGY

- Understanding Types of Data in modern Data Science workflows.
- Detailed breakdown: Structured, semi-structured, unstructured, quantitative continuous/discrete, and qualitative nominal/ordin
- Mathematical formulas, code examples, and laboratory execution guidelines.
- Common pitfalls, edge cases, and best practices in practical applications.

### LABORATORY PRACTICE / IMPLEMENTATION NOTES

1. Follow standard Python and Data Science coding practices.
2. Document all exploratory findings and statistical hypotheses.
3. Keep datasets and outputs organized in your repository workspace.
