DATA SCIENCE LABORATORY MANUAL

Module IV ? Statistics and Machine Learning

Topic: Supervised Learning

OVERVIEW & LEARNING OBJECTIVES

Classification algorithms: Logistic Regression, k-Nearest Neighbors (KNN), and Naive Bayes.

KEY TOPIC CONCEPTS & METHODOLOGY

- Understanding Supervised Learning in modern Data Science workflows.
- Detailed breakdown: Classification algorithms: Logistic Regression, k-Nearest Neighbors (KNN), and Naive Bayes.
- Mathematical formulas, code examples, and laboratory execution guidelines.
- Common pitfalls, edge cases, and best practices in practical applications.

LABORATORY PRACTICE / IMPLEMENTATION NOTES

1. Follow standard Python and Data Science coding practices.
2. Document all exploratory findings and statistical hypotheses.
3. Keep datasets and outputs organized in your repository workspace.
